

## Public Notice

### Exporting Complete Product Line of Stretch Reduced Seamless Tube and Technical Training to New Market Economy Country

-----Advanced & Mature Technology, Originated from Germany,

Build your Solid Foundation for Your Successful Business

#### **We can supply you with:**

- 1、 Help the entrepreneurs or enterprises who invest in seamless tube industry, to establishment the new factories, install and align the production line, provide technical advice and guidance, train technical workers, improve the technical level of the equipment.
- 2、 Provide complete product line for stretch reduced seamless tube and installation.
- 3、 Provide technical advice, guidance and training.

#### **The Introduction to Stretch Reduced Seamless Tube**

- 1、 After the thermo-mechanical control process (TMCP), the raw material (Low Carbon Micro-alloying Plate Steel) gives a advanced performance to stretch reduced seamless tube in obdurability and dimensional accuracy than traditional tubes. This new kind of tube represents the development direction of the world's pipes, for the

great advantages in energy-saving, environmental protection, high efficiency, water conservation, and material saving etc. during the manufacture processing.

Further more, it`s as the replacement of traditional tubes, having a equal or superior quality, with senior performances in interior chemical composition, metallographic microstructure, mechanical properties, appearance size,etc.

It not only applies to manufacture of heat exchangers, low & medium pressure boiler, municipal construction, but also the transmission casing pipe & oil pipe in chemical industry, power plants, fertilizer, oil & gas fields and other areas.

It is widely used as the continuous tube, expandable casing, and oil drill collar, drill pipe, representing the world's newest technology. In these years, there are 55% oil well pipe which is made by this technology, and there will be more, this is showing a large market!

- 2、 This technology and the equipment complex is origin from German, we accessed and absorbed Germany guide and experiences. After years of developing and improving, this technology is completely enhanced and mature. These products is widely used in civil engineering and national projects in China, and exported to Europe, USA, Asia, Africa and other countries and regions.
- 3、 Because of the advanced technology with simple manufacture

processing, uniform wall thickness, cut to length easily, fast investment, less-pollution, low-carbon, good for environmental protection, energy & material saving, lower cost, etc., this technology had been listed as Chinese National Torch Plan Project to promote, and gained lots of national policy support.

- 4、 Import this Stretch Reduced Seamless Tube technology, build your solid basis for your business empire and your better life.
